Summary

Frontend Developer with 4 years of commercial experience on a multi-product platform, focused on payment integrations and config-driven architecture, with a 15-year finance background in which money and payment flows are familiar territory. Builds and ships production features with AI coding agents as a force multiplier, making the design calls and validating every change.

Skills

React · Next.js · React Native

TypeScript · JavaScript

Redux Toolkit · MobX

REST API · WebSocket/real-time ·
Stripe/Klarna · Firebase

HTML5 · CSS3 · SCSS/SASS · Tailwind
CSS · Figma · Accessibility (a11y)

Jest · React Testing Library · Playwright
(e2e) · Storybook

Git · Vite · Webpack · CI/CD

GitHub Copilot · Claude · ChatGPT

Professional Experience

HeroContent.ai

AI Product Engineer · Part-time

12/2025 – Present

Working on the AI content pipeline (generation, QA, monitoring, review) for a restaurant SMM platform.

- Replaced the manual visual-review stage (previously rejecting ~40% of content) with an automated Vision QA audit, bringing manual image review to zero. Cut false positives with issue-specific gates.
- Raised generation quality (prompt logic, template selection, image pre-filtering, style rules): cut generation-stage defects by ~8%, shifting from "generate-then-discard" to "fewer defects upfront."
- Designed a read-only agent that continuously audits all active clients for content-plan readiness, calendar gaps, and approval blockers, sending concise, actionable Telegram alerts.
- Built decline-reason analytics (rates, breakdowns, per-item drill-down): made copywriter review a measurable QC loop feeding back into generation.

All Funeral Services, LLC

Frontend Developer

12/2024 – 07/2026

Working across four products of the platform: an internal multi-role operations and administration system; a public white-label memorial site; a client-facing subscription and payments product; and a configurable sign-in service.

- Built payment flows in a money-critical domain: Stripe/Klarna checkout supporting subscriptions, one-time payments, and promo pricing on the client site, plus payment handling in the internal admin product.
- Designed a config-driven architecture: built the runtime-config logic that controls which auth methods render in an SSO app, plus a config-driven checkout flow.
- Shipped a real-time chat (Stream Chat) to coordinate field contractors and staff directly in the app.
- Integrated authentication via Firebase (email, Google, Microsoft, Apple), deep-linking via AppsFlyer, and end-to-end analytics (GTM, Meta Pixel).
- Localized for English and Hebrew (RTL); wrote unit, integration (Jest), and e2e (Playwright) tests.

Missis Laser (6-clinic chain)

Frontend Developer

05/2024 – 11/2024

- Developed web apps for the chain (partner program, e-contracts, online booking) and a React Native mobile app.
- Integrated amoCRM and built bots to automate booking and request handling.

FullV (Boston-based startup)

Frontend Developer · Contract

09/2023 – 12/2023

- Built key components for a React Native mobile app, ensuring responsiveness and high performance.
- Implemented state management and navigation (Redux, React Navigation) for the app's dynamic screens.

WebImpulse Studio

Frontend Developer · Contract

03/2023 – 07/2023

- Developed the responsive site [invert.studio](#) as the sole frontend developer (React, Tailwind CSS).

Raketa LLC

Frontend Developer · Contract

03/2022 – 03/2023

- Created responsive interfaces for various devices and screen sizes with HTML5, CSS3, preprocessors (LESS, SCSS/SASS), and templating engines.

Education

The Rolling Scopes School

JavaScript / Frontend

2022 – 2023

HTML Academy

Frontend Development

2021 – 2022

Petrozavodsk State University

Accounting, Analysis and Audit

1997 – 2002 | Petrozavodsk, Russia

Languages

Russian (Native)

English (B2)

Serbian (B1)

Interests

Long-distance running, CrossFit
